2025 China-Italy education cooperation dialogue at Nantong University

On October 24, 2025, Nantong University hosted the dialogue, launching three platforms: (i) Siena College of Future Biotechnology, (ii) China-Italy Center for Education & Culture, (iii) Innovation Base for Italian Language Talent Training. This creates openings for Italian SMEs and educational institutions in design and vocational training. (**China daily**)

Strengthening science education in primary and secondary schools

China's Ministry of Education has mandated that by 2035, all primary and secondary schools must strengthen their science education: each primary school must have at least one science teacher with a master's degree and a vice-principal dedicated to science, and science must be embedded in both the formal curriculum and extracurricular activities. Promoting AI education in schools with guidelines

China issued two guideline documents to promote AI education in primary and secondary schools, aiming to build a tiered and spiraling general AI education system. The policy also restricts students' independent use of open-ended generative AI and prohibits teachers from using AI as a substitute for actual instruction. (**people.cn**)

Enhancing vocational skills for rural workers

China unveiled a plan with 14 specific tasks to improve rural workers' skills, boosting access to vocational education, job-seeking support, and entrepreneurship for about 300 million rural migrants, of whom nearly 100 million are expected to retire over the next decade, highlighting a significant upcoming demographic shift.. Demographic pressures on kindergarten education

Between 2020 and 2024, China's kindergarten enrolments fell by around 25 % (12 million children), and over 41,500 kindergartens closed. This reflects demographic pressures on early-childhood education and highlights the urgent need for structural adjustment and reform in the sector, as policymakers confront rapidly shifting population realities.
