Sustainability is SustainabITALY

From reducing energy consumption to carbon neutral production, Italy is focusing on transforming its processes and plants across the country to become a greener and more sustainable country.

Sustainability is a crucial issue and at the top of the agenda for ITALY and startups play a key role in moving forward towards more sustainable practices and methodologies in all sectors, many times thanks to the use of innovative technologies.

Italy's National Recovery and Resilience Plan places great emphasis on the green transition and on the digital transformation. A total of Euro 85 billion have been allocated to promote the ecological and technological transition in different areas. Of these, Euro 25 billion are invested in smart mobility and Euro 60 billion in circular economy and waste management.

Italy has seen a huge increase in startups in recent years, with over **14,500 startups registered as of July 2022**. In the global ecosystem, Italian startups are characterized by a high degree of innovation and often lead by a team of young founders.

Recently the Italian Government has launched a Euro 1 billion investment program aimed at the native startup ecosystem to create new opportunities and to promote innovation as a key driver for the growth of the national economy

The goal is to foster the technological and digital transformation of companies, in order to overcome the contraction induced by the pandemic crisis and direct the recovery of investments towards strategic areas for competitiveness and sustainable growth.

Italian Trade Agency - ITA

ITA
ITALIAN TRADE AGENCY

ITA - Italian Trade Agency is the Governmental agency that supports the business development of our companies abroad and promotes the attraction of foreign investment in Italy.

With a motivated and modern organization and a widespread network of overseas offices, ITA provides information, assistance, consulting, promotion and training to Italian small and medium-sized businesses. Using the most modern multi-channel promotion and communication tools, it acts to assert the excellence of Made in Italy in the world.

FIND YOUR ITALIAN PARTNER

ITA - Italian Trade Agency supports the business development of Italian companies abroad, increases business opportunities, improves the image of 'Made in Italy', promotes industrial collaboration and foreign investment in Italy.

Find your Italian partner is a business directory with virtual showcases of Made in Italy companies.

We offer you an overview of Italian businesses, including company profiles, products images and details, website, business proposals and contact information.

Foreign companies or agent interested in Italian products or looking for partnership with Italian companies, can access the database with the profiles, searchable by sector or product, and find a business partner.

Astrakode S.R.L.

As we employ a model-driven approach to abstract both a blockchain network and a smart contract (regardless of the specific blockchain implementation), the first core technologies are related to this aspect. More in detail, ontologies are first developed via a UML diagram, and then implemented via a formal definition through xml files that are coherent with established (and proven) baselines (metamodel, grammar, etc.).

Such ontologies are then translated into something that can be rendered by our front-end engine via a meta-ontology defined in JSON.

The second core technology "bundle" is related to the front-end engine of the platform. This layer is implemented with a mix of React and Angular, and is able to parse the meta-ontologies offered by the JSON files and thus dynamically render a component in the visual IDE.

With respect to the technologies "compatible" with the AKB platform, at the moment the Network Composer is able to produce Hyperledger Fabric networks.

In the future, we plan to include other suitable technologies if need be, even though since this specific IDE only makes sense with permissioned blockchain implementations, the range of other technologies we could integrate is somewhat limited.

The Smart Contracts IDE's first iteration will enable the development of Solidity smart contracts. In the near future, javascript-based smart contracts for Hyperledger Fabric will also be added to the IDE's offering. In the medium term, we plan to be reactive to the market and extend the IDE's offering with popular non-EVM smart contract technologies.

Boatsandgo S.R.L.

Introducing Boatsandgo the first search engine for charter yachts, boats rental and boat sharing deals, you can compare deals from hundreds of sites and get the right boat at the right price.

A search engine designed to help the user to easily organize a boat vacation (like Trivago for hotels). Users can save time, money and go directly to the booking sites.

Our search engine based on a specifically developed algorithm (copyright 2020 all rights reserved) searches the web to find the offers matching the user's selected filters.

Boatsandgo does not perform bookings.

Boatsandgo does not charge the users.

Companies can promote their brand and benefit from high quality traffic to their sites.

Users can save time and money.

Boatsandgo offers also a Saas (software as a service) solution for those fleets and operators that are scarcely digitalized or not digitalized at all. The software which has a "freemium" entry level gives the chance not only to list the offers on Boatsandgo and other partner platforms but is a full digital tool to manage all the business, from a booking manager to cashless payments, tools for web sites and many more features.

NOTARIFY
a tailor-made digital ecosystem

New coming "Notarify Hybrid Card"

The first card + cryptowallet with biometric identification and display for OTP

Notarify3

Document manager and validator with electronic signature in Blockchain

Dataroom+

Custom area for document exchange: confidential, protected, certified, tracked and white-label

Onboarding+

The platform that automates KYC & Due Diligence processes in less than 1 minute

Blackbox+

Connect your software and authenticate data streams of any nature and in full compliance with ISO 27001 and privacy standards

API/Integration

Easy and accessible with your software, to validate in the Blockchain data and documents generated

Consulting

Strategic consulting on Blockchain, Crypto, NFT for interoperability and process decentralization.

Education

Protect your intellectual property, knowledge and drive innovation in your organization

Easy-to-use and tamper-proof Notarization
Protect your data

Notarify3 is a document lifecycle management platform in Blockchain, that provides legal enforcement to any file and e-signature.

Genuine Way S.R.L.

GEN Platform is the first blockchain platform vertically dedicated to enabling brands to notarize their environmental & social impact.

The platform allows the brand to notarize a bundle of corporate and supply-chain documentation on the public blockchain, in order to create transparency for consumers and liability for the brand.

Taking part in this process allows the brand to enter the ecosystem and connect with our conscious consumers.

Target Industries: agrifood, wine, spirits, fashion, cosmetics, design, utilities.

Genuine Way also develops tailored projects dedicated to corporates and organizations (consorzio, unions or associations) that want to track their supply chain taking advantage of blockchain technology, showing consumers and market transparency and accountability.

Genuine Way, through special projects that are created and decided according to companies' needs, stresses and communicates the ESG values by notarizing the supply chain on blockchain, certifying in this way the quality of the product, using detailed info that can go back to each production line batch.

Consumers then interact with the product via a QrCode connected to a native mobile interface, a digital label, from which - browsing from the smartphone – she/he can find out all the info about what she/ he is buying.

Agrifood, wine, spirits, fashion, cosmetics, design, are some of the sectors particularly involved and interested in blockchain technology.

It's Prodigy S.R.L.

Highly focused on technology, our digital transformation services include the analysis, design, development and creation of technologies and services, with the implementation of Industry 4.0 technologies including the Internet of Things, Artificial Intelligence, Big Data, System Integration and robotics fields.

Our team is made by 50+ developers with specific know-how for sectors with more than 8 years of experience.

Some examples of our projects are:
- App mobile of fintech new banking services
- Business Process Management Platform in Telco
- Quotes Generator Platform for Assurance company
- Business Intelligence Reports API for Public administration

We have developed and designed DataProdigy, our versatile analytics and end-to-end fast report creation platform with business intelligence capabilities. Thanks to powerful and automated data integration, data visualization and predictive analytics based on artificial intelligence, the DataProdigy platform allows business managers to monitor performance in a single view and discover new insights in real time.

Features:
- Customizable platform
- Multilingual system (can be used in different languages)
- Able to integrate with other business platforms (SalesForce, Sap, Google Cloud, Oracle, AWS, etc.)

DataProdigy helps companies and professionals who carry out important multi-source business operations to interpret and use their data.

Livegreen Società Agricola S.R.L.

Our technology is based on the use of microalgae-based technologies that allow us to reduce the impact of those human activities that give rise to negative externalities, thanks to the ability of microalgae to "eat" CO_2 and to avoid the waste of water.

In particular, we are able to design and develop technologies that help improve the responsible use of resources by avoiding wastes and increase efficiency of the resources available, while merging the ambit of food production in innovative applications.

Our BBS technology - co-financed by the European Space Agency - is directed to use satellite communications to synergically produce microalgae while contributing to reducing CO_2 and pollutants, diminishing the impact of human activities in urban areas.

LPE Group S.R.L.

Increase Your Profits and Reach your customers easily with our innovative Solution

1. We BROADCAST an ADV during the SMARTPHONE'S CALL WAITING TIME

2. USERS get a REWARD, OPTIMIZE their time and make it profitable

3. COMPANIES REACH easily their USERS and RETAIN them with REWARDS

4. TELCOS have a new UNEXPLOITED media channel, increase REVENUES and REDUCE the CHURN RATE

Wait4call's White Label main Features

Audio — Broadcast audio messages in every phone call of your users

Video — Deliver video spots within your application in a dedicated section

Reward — Remunerate your users for each action and create a dedicated wallet

Wait4Call's service is an innovative solution for Telcos and Companies to reach their own potential customers with the power of digital audio. Wait4Call exploits a space never used up to now: The call waiting time. When a user makes a whatever phone call, he will listen to an ADV until someone picks up the phone, and will earn money for it.

The main Wait4call's features are personalized audio spot (as well video spot), monetization and donation.

On the other hand, advertisers can reach their potential customers easier and in a non-invasive new way, through targeted and geolocated ADV. Thanks to a Saas Model, Telcos and Companies can integrate, through a customized SDK, one or more W4C features into their own app and use the custom backend to manage and control them.

By using this solution, they have an innovative media channel to reach their customers with customized messages in the peak of attention. Thanks to the monetization they can increase user loyalty and reduce the churn rate.

ML Cube S.R.L.

ML cube was born at the end of 2020, from the activity of the Department of Electronics, Information, and Bioengineering of Politecnico di Milano on the initiative of a pool of professionals, professors, and researchers, to bring AI-based Solutions and Products to the Market. It is based on specific lines of research and the experience accumulated in twenty years on application projects carried out for the excellence of the industrial world and services, in particular on the sub-domains of Machine Learning, Reinforcement Learning, Transfer Learning, Online Learning, Game Theory, and NLP.

The team is constantly engaged in research and deployment of solutions. It participates in the most prestigious international conferences, and is often a board member of Italian and European industry associations and national observatories, in governmental strategic initiatives, including those more specific to the topic of ethics in AI.

ML cube offers a valuable opportunity to the best minds in the country. Italian research has always been considered a point of excellence in every scientific field and the ambition of the startup is to offer these valuable resources an Italian landing place before they decide to move abroad.

In addition to research, in constant collaboration with the Politecnico di Milano, other international universities, and research centers, ML cube has three business lines: Products, Solutions, and Education.
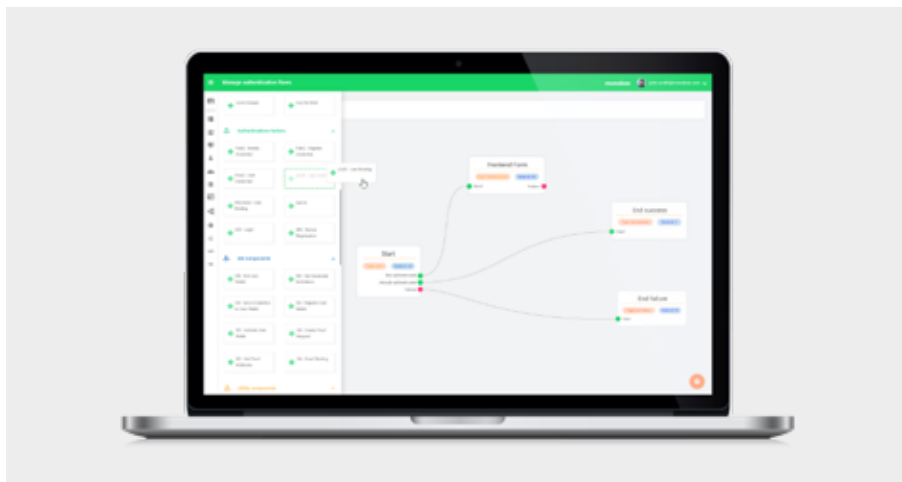

Through its broad proposition and high scientific content ML cube aims to enable AI transformation of business models and bring to market AI-based solutions with high technological content.

Monokee S.R.L.

The main product developed relates to a Cloud-based Identity and Access Management platform, which uses the MEAN stack. The possibility of integrating the decentralized identity using blockchain, has been added to this platform. The Self Sovereign Identity is a digital identity model that puts the user in full control of their identity and the information to be shared.

Thanks to the SSI model we will be able to use our unique "wallet" to access our banks, personal accounts, public services, without having to remember different credentials, being able to control and choose which of our personal information to share and with whom. An identity and access management system that manages identities in a decentralized way by leveraging distributed ledgers such as blockchains: a person will remain in full possession of his digital identity in full respect of privacy and security.

My-Money S.R.L.

My-Money is a patented and revolutionary payment system, completely biometric and device- free.

All our life is inside our phone, making it our biggest weakness.

That's why we have created a new payment system, making it extremely secure, easy, and fast.

Secure: no more frauds thanks to biometrics, no one will be able to clone your cards, or steal your identity, because our system is based on the recognition of your fingerprint and the biometric readers are FBI certified: this means that they are able to detect if your finger is alive, and if it is you : a fake fingerprint or a dead finger will not work.

Easy: everyone will be able to use it. No more barriers due to the technological misalignment, or due to the wealth or poverty of a Country, or due to the age of the user: reach out your finger and pay, everywhere and anywhere, because you will no longer have to worry about having your phone run out of battery, or if you have it with you, or if you can afford a latest generation phone.

Fast: paying using your finger is a natural gesture, it will only take 1 sec.

No more queue at the entrance of the underground or at the entrance at the stadium.

From today, you will no longer need to carry with you a credit card, cash, or your phone.

My-Money: the world on your fingertip.

Proxicad S.R.L.

Proxicad is a solid company that has been operating for over two decades in various fields of engineering and outsourcing, providing projects and products in mechanical and plant engineering.

Proxicad can rely on a working group composed of experts and engineers particularly competent and close-knit, highly flexible and specialized, able to assist its clients in all phases of the project, from product conception up to its management.

SERVICES
Proxicad is able to meet the requirements for designation and design and for:
- Running mechanical designs in industrial scope
- Design of components
- Possibility of direct conversions and 3D interchange files
- Drafting of three-dimensional models, construction drawings with export and/or conversion to standard formats DWG-DXF-IGES, STEP, STL.

Proxicad, aside from the design and provision of professional engineering services, is profitably engaged in experimental research and basic research, not only in the core business sectors. The R&D activity has made it possible to expand technical skills by opening up to new markets.

One of the keys to Proxicad success is certainly the technology transfer from one sector to another, which has allowed it to offer new solutions to static and consolidated markets, and to continuously innovate services, processes and products. placing itself in an avant-garde position above all in the field of Additive manufacturing, in particular it has set up a prototyping and production laboratory, equipped with plastic and metal printers.
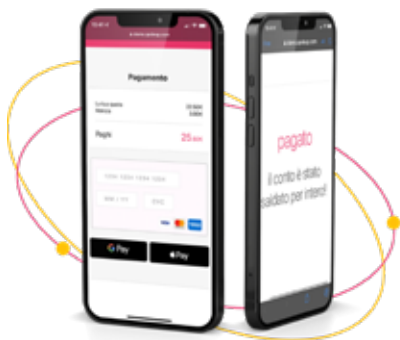

Proxicad, thanks to its highly qualified staff, also offers support for the topological optimization of the product. An engineering technique that allows to considerably reduce the mass of an object while maintaining the mechanical performances unaltered: the result is a light and performing component.

QODEUP S.R.L.

Qodeup is a one-stop shop. We are launching a revolutionary payment system at the restaurant. The customers will take 18 seconds to pay, instead of the average of 18 minutes, without also leaving any inactive table for the restaurateur.

The customer can order from the waiter and at the end of his meal he simply scans the QR Code on the table and goes to the payment page. From there he can decide to split the bill equally, pay a custom amount or pay for all. In addition, he can also leave a tip for the amazing staff. The restaurateur can see the progress of the table on his dashboard.

Security Pattern S.R.L.

Security Pattern is an innovative start-up founded in 2017 in Italy, its core business is consultancy and development of innovative security solutions for embedded systems.

We support customers from the initial phase of the project with the definition of security requirements, selection of building blocks, development of hardware and software components for ASIC, FPGA and microcontrollers.

We provide development methodologies for customers who need to demonstrate a 'secure by design' approach, like in the cases of Common Criteria, ISA/IEC 62443 or ISO 27001.

We are the first Italian cyber security company certified with IEC 62443-4-1:2018 standard.

We will bring to North Star our leading products:
- IoT Security Check-up, the most efficient and cost effective service for security architecture reviews of IoT platforms.

- IoT Secure Suite®, a set of advanced tools and components intended for device manufacturers, essential for implementing secure IoT platforms

- IoT SUM, acronym for "Security Update and Monitoring", an innovative service for continuous monitoring of IoT devices vulnerabilities.

Xenia Progetti S.R.L.

Xenia Progetti has been running in the ICT market for more than 30 years and provides innovative products, solutions and services in different market segments: Oil & Gas, Industry, Healthcare, Telecommunication, Public Administration and Utilities.

With fast time to market, Xenia provides the best-in-class solutions based on the most innovative software technologies to best satisfy its customer's needs: Machine Learning, Artificial Intelligence, Computer Vision and Image Based Localization are used to provide advanced tools to increase safety at work in potentially dangerous environments and improve worker efficiency.

Xenia Progetti is considered a preferred partner for System Integration Services, Application Maintenance, IT Security Services, Document Management, SAP Services and application development.

At the same time, Xenia supports customers on site for developing customized solutions, as well as for providing System Integration, Maintenance and Technical support services.

In Oil & Gas, AMICO (Asset Management for Industrial COmplex plant), a system that allows cataloging assets and technical documents used in manufacturing companies equipped with medium-large industrial plants. The solution also integrates workflows related to update processes, providing an environment for managing changes performed in a collaborative way with external contractors. The native integration with SAP and other asset management systems, combined with the ability to extend the suite with new "Add-Ins" that use the asset database, makes the platform adaptable to any context.

XRIT S.R.L.

Our product XRS that applies extended reality to engineering is revolutionizing the world of construction.

With XRS you can view with centimetric precision the geo-referenced 3D model of the building directly on the site and you can walk through the system thanks four different set-up:
1. Wearable set-up with visor;
2. A Tablet;
3. A mobile phone in a handle;
4. A Screen for a streaming vision.

You can interrogate the 3D model through the different commands of the system.

Thanks to its technology, XRS is a real work tool with which you can:
- Take linear and topographic measurements;
- Virtual meeting thanks to the AVATAR function;
- Reduce the time for progress review and the re-works;
- Perform safety simulation.

10-13 October 2022
Hall Z6 - Dubai World Trade Centre

Marche Region

Marche is one of the twenty regions of Italy. The name derives from the medieval word marca or march, originally referring to a borderland territory of the Holy Roman Empire, such as the March of Ancona and others pertaining to the ancient region.

Marche's economy is mostly based on clusters of SMEs ("distretti industriali"), working in traditional manufacturing sectors (e.g. typical Made in Italy products such as shoes, clothing, electric appliances, machinery, furniture etc.) distributed through the Region.

In 2019 the nominal GDP of Marche was equal to € 42.588,26m and it contributed to the 2.4% of the national GDP (Eurostat, 2022).

The Marche is a very fertile region for business creation and it is increasingly so for innovative start-ups.

Almost 400 innovative startups have been registered, many of them in the high technology, artificial intelligence and information technology sectors.

The Marche Region will be present, in the Italian Pavillon, at "NORTH STAR 2022" with 5 strictly selected start-ups: CYBER EVOLUTION, E-MOD, GPROJECT, I SEMAR, LINKY INNOVATION and TELEPHARMATEC.

Cyber Evolution S.R.L.

CYBER EVOLUTION SRL is an innovative start-up company offering high-tech solutions in Cyber Security. Our solution, unique in terms of technology and ease of implementation, covered by an industrial patent and already validated by the market, is being definitively launched on a potential international market.

The company mission is to make complex technologies such as Cyber Security available to the widest possible audience. Cyber Evolution, with its LECS system, achieves this goal with points of differentiation and strength compared to market competitors, thanks to Plug & Play devices that implement immediate and effective countermeasures, at a low cost and accessible to every company.

LECS technology integrates seamlessly with all cyber security systems that already exist and/or are present in the network.

E-MOD S.R.L.

E-MATCH is a B2B2C digital platform that accelerates and simplifies the procedures for the construction of renewable energy plants in favor of the energy and ecological transition:
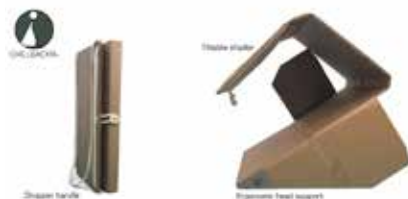

- Encouraging the meeting between the actors of the energy ecosystem in a short supply chain, thanks to a geolocation service

- Acting as a document cloud, thus reducing the time, costs and risks related to the transfer of documents and obtaining authorizations from the PA

- Having a checking of the steps necessary to validate and complete the projects
