Xiaomi Launches Three Self-Developed Chips

Xiaomi has unveiled three self-developed XRing chips, expanding its semiconductor strategy from smartphone SoCs into AI acceleration and intelligent driving. The 3nm XRing O3 packs 24 billion transistors, while the XRing D100 supports 200-billion-parameter AI models. The chips highlight China's push to build integrated computing capabilities across smartphones, vehicles and smart-home devices. **(China Daily)**

AI Reshapes China's Gaming Industry

China's gaming industry is rapidly integrating artificial intelligence (AI) across development, testing and operations. China's AI gaming cloud market reached 1.86 billion yuan (\$275 million) in 2025 and is projected to grow at 91.6 percent annually through 2029. Meanwhile, Chinese developers are accelerating global expansion, with overseas sales becoming an increasingly important growth driver. **(China Daily)**

China's Semiconductor Supply Chain Shows Greater Resilience

China's semiconductor industry is strengthening supply-chain resilience amid geopolitical and trade uncertainties. Nexperia China resumed independent production within 11 months after wafer supplies from its Dutch headquarters were cut off, delivering over 40 billion chips without quality incidents. Meanwhile, China's integrated-circuit exports reached \$177.28 billion in the first half of 2026, up 96.1 percent year-on-year. **(China Daily)**

China Advances 6G Development and Commercialization

China is accelerating 6G development under its 15th Five-Year Plan for the information and communications sector. The plan calls for timely 6G commercialization, continued core technology research and trials, and development of 6G base stations, core networks and smartphones. It also promotes AI-native networks, integrated sensing and communications, satellite-terrestrial integration, and 6G international standards. **(CCTV News)**

China's Memory Chip Industry Gains Global Market Share

Chinese memory chipmaker ChangXin Memory Technologies (CXMT) raised its global DRAM market share to 10 percent in the second quarter, up from 4 percent a year earlier, narrowing the gap with the top three suppliers. Strong artificial intelligence and data center demand drove global DRAM revenue growth, while CXMT's first-half revenue surged nearly 900 percent year-on-year. **(China Daily)**
