China Strengthens Regulation of AI Misuse

China has removed more than 5.61 million unlawful or rule-violating AI-generated content items and penalized over 49,000 accounts in a nationwide campaign. Authorities also acted against more than 2,400 websites and apps, targeting AI-enabled misinformation, impersonation and harmful content. The crackdown highlights China's expanding regulatory framework alongside the rapid commercialization of generative AI. **(Xinhua)**

Shenzhen's AI Hardware Ecosystem Accelerates Growth

Shenzhen's AI hardware ecosystem is expanding rapidly, supported by dense industrial clusters and integrated supply chains. From January to July, AI product sales in Huaqiangbei rose over 55 percent year-on-year, with AI glasses sales doubling and drone and robot sales increasing 60-70 percent. A 500 million yuan (about \$74.55 million) fund supports early-stage technology ventures. **(China Daily)**

Nubia Readies For AI-Agent Smartphone

China's smartphone industry is moving toward system-level AI agents that can execute tasks across applications. Nubia's NaviX Ultra integrates ByteDance's Doubao AI assistant, with more than 10 partner platforms already connected. Artificial intelligence (AI)-capable phones are forecast to account for 53 percent of China's smartphone market in 2026, reaching 147 million units. **(China Daily)**

China Advances Quantum Computing with High-Efficiency Quantum Routing

China has achieved a breakthrough in superconducting quantum computing, with a single quantum router reaching 98% information transmission efficiency and a two-layer routing network achieving 93%. The technology enables scalable quantum random-access memory on existing hardware, supporting complex quantum functions while potentially improving computing efficiency and reducing costs. **(Global Times)**

China's Consumer Electronics Industry Accelerates AI Integration

China's consumer electronics sector is accelerating AI integration. The 2026 China International Consumer Electronics Exposition in Qingdao (4-6 Sept.) covered 60,000 square meters, attracting nearly 300 companies from 12 countries and regions and almost 50,000 visitors. Over 30 new products and technologies were launched, highlighting AI commercialization across consumer applications. **(Xinhua)**
