ITA - Italian Trade Agency is the Governmental Agency that supports the business development of Italian companies abroad and promotes foreign investments in Italy. With a motivated and modern organization and a widespread network of overseas offices, ITA provides information, assistance, consulting, promotion and training to Italian small and medium-sized businesses. Furthermore, ITA assists foreign investors to establish or expand their operations in Italian economy, guiding them throughout the full investment life cycle. ITA acts in accordance and under the aegis of the Italian Ministry of Foreign Affairs and International Cooperation.

FIND YOUR ITALIAN PARTNER

ITA - Italian Trade Agency supports the business development of Italian companies abroad, increases business opportunities, improves the image of 'Made in Italy', promotes industrial collaboration and foreign investment in Italy. Find your Italian partner is a business directory with virtual showcases of Made in Italy companies- We offer you an overview of Italian businesses, including company profiles, products images and details, website, business proposals and contact information. Foreign companies or agent interested in Italian products or looking for partnership with Italian companies, can access the database with the profiles, searchable by sector or product, and find a business partner.

Cerebro® is a startup created in 2018 by a group of Italian Doctors and Researchers in the field of Biotechnology in Neuroscience.

Through Neuronavigation and Neuromodulation techniques we build scientifically shared but individually perfected rehabilitation models.

Waiting for our Research Lab to be ready, we developed innovative technologies and designed them to make them accessible to everyone. Everything we implement and manufacture meets the highest Italian quality and safety criteria.

Our medical devices are at the forefront of innovation: NIR is a photobiomodulation medical device that uses NIR infra-red light to enhance neural metabolism and is used in all neuroinflammatory disease. fTMS® is a internationally patented medical device that creates a static cortical magnetic field that restores neural bioelectrical balance and is used to prevent Mental Fatigue and support rehabilitation in brain damage-derived symptoms.

Comftech is a certificated and an innovative start-up that develops, produces and sells wearable monitoring systems based on connected garments. Comftech textile sensors allow accurate measurement of physiological signals and parameters, like Heart rate and ECG trace, breathing signal, body position, activity level. Comftech has more than 10 years of experience in the development of wearable systems, it is strongly Quality oriented (ISO 13485), and has validated its products through clinical trials. Comftech's expertise ranges from textile technical expertise, algorithm development, to the design and production of electronic devices for storing and transmitting physiological signals detected by sensorized garments. Our technology is very flexible and can be adapted to many different medical applications. Comftech's mission is to design textile technology that can support clinicians and patients in hospital or at home thanks to remote monitoring. Adaptability, flexibility, quality and a totally user-centred approach are the basic ingredients of Comftech's technology and innovation.

New LumiFold: a 3D manufacturing device that we designed, built and patented. It fits in a suitcase and was designed for a foundation that wanted to explore the feasibility of having a portable solution for producing dental parts made with biocompatible resins, to be used in developing countries.

IDM Lab
Stand No. H7.C13

lightScience is an innovative startup founded in Italy in 2020. Its aim is developing a Multiparametric Blood Analysis Portable System built on spectroscopy, cloud computing, and machine learning based chemometric calibration models.

Our proposal is structured in two solution families: myLAB, and MASSscan. We have already developed the first use case for both platforms.

From a drop of blood, myLAB pkYOU could deliver results for several analytes; among them, myLAB can sense Phenylalanine that is needed in phenylketonuria (PKU) management and actually performed only in several laboratories.

MASSscan Viral detection is capable of sensing infectious agents, such as SARS-CoV-2, from saliva. It is capable of determining carrier status of symptomatic and asymptomatic patients. Patients can perform by their own the sampling procedure, thus avoiding crowds and protecting healthcare professionals from contagion.

RAYLAB is an Italian innovative startup founded in 2017, spin-off of Politecnico di Milano. Starting from a strong knowledge of the scientific basis, we are working on the cutting edge of the radiation detection to design and develop innovative and safe solutions.

We aim to offer high performance and high quality results connected with a smart user experience.

Our focus on innovation led us to develop a completely new way of approaching the neutron spectrometry and radiation protection. Partner of NECTAR (NEutron Capture-enhanced Treatment of neurotoxic Amyloid aggRegates): awarded funding H2020 FET Open project started in 2021. NECTAR aims to develop a completely alternative and revolutionary strategy to address Alzheimer Disease treatment. RAYLAB is collaborating with many different entities and companies from the industrial, medical and research environment.

RIC3D S.r.l. is a dynamic, fast-growing and innovative startup based in Italy. Founded in Milan in 2018, with an operative headquarter in Matera (Basilicata), the company's mission is to introduce a new concept of circular economy, encompassing different sectors (medical, IT and design). Indeed, Ric3D's main goal is to strengthen the trust of the healthcare sector towards new 3D technologies. Namely, starting from medical-imaging data of organs, obtained through MRI or scanners, RIC3D elaborates 3D-printed medical models for surgical, patient-specific preoperative planning and for medical professionals' education and training.

These innovative activities are supported by two licensed software:

- **"MED3D VR LAB" filed with SIAE in 2017 – seq. N° 012023 – N° D011120;**
- **"ARF" filed with SIAE in 2019 – seq. N° 013612 – N° D01267.**

Although Ric3D's mission focusses on addressing the needs of the medical sector, lately the company is focussing on the tourism sector as well.

RIC3D SRL
Stand No. H7.C10

UBT Srl is a MedTech company with a portfolio of truly disruptive medical devices for imaging diagnostic based on microwave technology instead of ionizing radiation (x-rays).

UBT's microwave imaging technology overcomes x-rays' accuracy, without the risks and the limitations associated with ionizing radiations. UBT has so far developed two different products, which present unique selling propositions (USP).

MammoWave is a novel CE-marked x-ray-free mammogram for breast cancer screening.

USP1: the absence of harmful radiations enables more frequent screenings to a wider population, including young women;

USP2: the examination is women-friendly, comfortable (breast is not compressed as it is with traditional mammography) and discrete;

USP3: the examination is operator independent.

BrainWave is a novel device for brain stroke detection and classification.

USP1: as the device is a handy and mobile apparatus suitable for ambulances, it allows both examinations and start of the appropriate treatments prior to patients' arrival to the hospital.

VALIAMO is an exciting and innovative Italian manufacturer of Hospital Equipment, Home Care and Medical Solutions using Artificial Intelligence and high technology. VALIAMO is a science-led healthcare company and the mission is to help people feel better inside hospital, live longer, improving the work of nursing staff and optimize the hospital efficiency
