CEFLA is a multi-business Italian group, founded in 1932 in Imola (Bologna) where it has its head offices and several large manufacturing facilities all over the world. The Group has some thirty facilities (of which about half engage in manufacturing) in numerous countries. Cefla operates in the following specific business areas: ENGINEERING (plant engineering in the civil, industrial and energy sectors); SHOPFITTING (shop equipment and personalised solutions for Retail and Contract); FINISHING (machines and complete plants for coating, finishing and digital printing); MEDICAL EQUIPMENT (for the dental and medical sectors); LIGHTING (company specialising in the development of LED technology). Cefla's strength stems from its founding principles: strategic vision and internationalisation, investment in technology and innovation, equity-related and financial solidity for a constant and profitable growth.

Cugher's success for over 50 years on printing machines for screen printing on glass is the result of an efficient mix of productive resources and cutting-edge technologies and derives from the work of high-profile professionals. The company was among the first companies in the world to automate the screen-printing process on flat glass and nowadays it is recognized as one of the most technologically advanced producers in the world.

The consolidated and strategic technological plus allows Cugher to offer solutions:

- Innovative thanks to the constant R&D investments and the deep knowledge of industrial processes
- Highly customizable on specific customer's needs: the flexible engineering drives the production
- High performing in terms of finished product quality, productivity and production flexibility

DENVER is a company that produces machines for the stone and glass industries.

Established in 1984 in the Republic of San Marino, today Denver offers the largest range of stone and glass processing machines, including: bridge-saws with 3 / 4 and 5axis, CNC router machines with 3, 4 and 5 interpolated axis, 5 Axes CNC working centers, universal vertical CNC machines, waterjet and Automatic polishing slab machine. The best price-quality rate, a friendly interface, top quality components and absolute respect for human relationships, are the basis on which Denver build his business and successful experience.

DENVER is the centre of technological excellence that wants to drive the development of San Marino Tech Valley, inspired by a mentality that has always pursued an excellence deeply rooted in our corporate culture.

FRATELLI PEZZA is a leader in the manufacture of sandblasting and marking equipment for flat glass. The current product range of the sandblasting machines consists of 2 series of automatic cabins: the ZEPHIR, which is equipped with basic working features, and the MISTRAL EV, top of the range model, that enables to carry out zonal and shading blasting. Shifting the focus to the marking equipments, there are 2 manual and portable units, Marker 101T and Marker 301T, which enable to imprint a mark of 25 mm and 30 mm respectively. There's also a line of automatic marking devices, the EASYMARKER series, which consists of 2 models: EASYMARKER EV and EASYMARKER UP, which are combinable with vertical and horizontal machines respectively.

Founded in 1940, Helios Quartz started as a family-owned company and it has now grown into an international market leader for the production of IR heaters and UV lamps and for Quartz Glass processing. With two production plants in Italy and Switzerland combined with offices in the USA, South America and Asia, Helios Quartz is a major supplier also for specialized equipment for industrial, scientific, and medical applications.

Helios Quartz products are used in many fields of application of the Glass Industry:

- Detection of the TIN SIDE on float glass
- Laminated glass production and processing
- Drying screen printing and coating curing
- Mirror production
- Glass bending and fusion
- Glass annealing processes
- Vacuum processes

We produce diamond tools since 1955. Complete sets of diamond tools, metal, in resin or polishing for a precision result from the cut to the finishing.

Round edge, bilateral and straight-line grinding wheels, high machining speed, excellent and long-lasting finishing of the edges.

Tools for CNC with holes or cold glass-cutting. Our range is available for all types of machinery.

Cylindrical, sector and continuous grinders for flat edge processing, trapezoidal profiles. Sector and continuous cup grinding wheels, with various degrees of hardness, for roughing and finishing of the flat edge, high-speed machining and excellent finishing of the edges, metal and resin for threading and bevelling.

Glass-drilling and countersinking tools.

Manzelli is a recognized leading brand in the production of vacuum lifters since the end of the '70. It is appreciated worldwide for its unique Made in Italy style and its attractive design, other than the well-known technology and the high-quality components. During the years, Liftstyle has become even more competitive on the international scene, especially in USA, which has become our first market since the year 2000. This credit encouraged us to open a new branch in Houston, Manzelli North America. Our corporate philosophy drives us to constant research for the improvement of our quality, and it fortifies our mission of enhancing our technical solutions, aimed at the safety of those who choose Liftstyle as their partner.

Mappi International produces high quality tempering systems for the flat glass industry, now greatly enhanced by Siemens' Mindsphere technology. All new Mappi tempering furnaces are the first to be certified "Powered by Siemens" in the glass industry. In addition to performing their work excellently, both the ATS 4.0 series and the Fox series are the first machines ready to implement the features of Industry 4.0. ATS 4.0 and Fox incorporate all the latest innovations from Mappi: movements managed by Siemens PLC, precise and punctual heating coordinated with a cooling management for the hardening phase that provide the highest quality on the market. The plants process all types of glass including low emissivity glass, manage air distribution and convection separately in the lower and upper heating chamber by modulating the air pressure in individual areas. Last but not least, they are extremely easy to use and efficient, maximizing the production cycle with considerable energy savings, simplifying the start-up operation with only one hour required before being in operation after the machine is started. Mappi America, a branch of Mappi International, provides timely and widespread assistance and support to the American market.

R.C.N. SOLUTIONS SRL manufactures three lines of machines each developing in different sizes, but most important, each line is open to customization upon study of feasibility.

Glass laminating line:

Powerlam - bagging-free solutions
Lammy System - bagging laminating kilns
Smart - medium size laminating machines

Bending line:

Eco Special – designed for important and special curves

Chemical Tempering Line:

RIVA by RCN – different sizes for uncountable applications

In addition, we can supply **REVA BF**: the RCN laminating interlayer

And the **EASY Connect App** – production remote control installed into our machines.

What differs R.C.N. from other choices is the flexibility in construction which is a great peculiarity and great advantage for the clients; the accurate selection of high quality materials used in built-up and the experience acquired in searching for technical developments.

Stefiglass International is a leading manufacturer in the world for a wide range of glass washing machines, complete IG lines and complementary equipment. With over 40 years of experience in glass machinery manufacturing, our company is able to offer good quality, assistance after sale and reliable service. Stefiglass International is located in Pieve San Giacomo, about 100 Kilometres South of Milan. The operating phases regarding quality control and testing are followed by a team of technicians with expertise gained over the years. Our machinery, manufactured entirely using mechanical, electrical and electronic components conform to EU norms, are characterized, moreover, for the particular attention to the environment and eco-friendliness. Our production range includes: vertical washing machines, complete lines of production of ig units and auxiliary equipments. The company is specialized in the creation of prototypes that respond to the most complex custode requests. Stefiglass' production, other than a wide range of standard models, also offers the possibility of customizing plants as per specific needs of processing. Customization represents the prevalence of orders within the production activity. For this purpose Stefiglass has a Research & Development office dedicated to optimizing the machines in production and designing innovative solutions.
