

The Oxagon

ITALIAN TRADE AGENCY

ICE - Agenzia per la promozione all'estero e
l'internazionalizzazione delle imprese italiane

THE OXAGON
a floating port city in
NEOM that will offer
unparalleled
connectivity to global
markets.

- It was launched in 2021 by His Royal Highness Prince Mohammed bin Salman bin Abdulaziz, Crown Prince and Prime Minister of KSA.
 - Oxagon is a floating industrial city under development in the southwest corner of NEOM.
 - Strategically located on the coast of the Red Sea, through which 13% of the world's trade passes.
-

The city includes an integrated port, a logistics center and advanced manufacturing facilities.

Sitting at the crossroads of 3 continents, Oxagon is place where people, nature and technology come together in harmony.

The city will act as a port and logistics hub for the wider Neom project – a renewable energy-powered region that forms part of Saudi Arabia's Vision 2030 plan to diversify its economy and minimise reliance on oil.

**Oxagon will
have a
distinctive
octagonal
shape with part
of the
development
on land and a
large section
protruding into
the Red Sea.**

Divided from the land by a shipping canal, the Neom developers claim that the off-shore section of the city will be the "world's largest floating structure".

The floating city will be arranged around water-filled squares connected by small canals. It will also contain a cruise terminal and oceanographic research centre.

"Oxagon will be the catalyst for economic growth and diversity in Neom and the Kingdom, further meeting our ambitions under Vision 2030," said Saudi Crown Prince Mohammed bin Salman.

"Oxagon will contribute to redefining the world's approach to industrial development in the future, protecting the environment while creating jobs and growth for Neom. It will contribute to Saudi Arabia's regional trade and commerce and support creating a new focal point for global trade flows."

AUTONOMOUS AND SUSTAINABLE MOBILITY

Autonomous pods and shuttles, urban
air mobility, green heavy duty
commercial vehicles, green watercraft

MODERN CONSTRUCTION

Modular construction, 3D printing,
sustainable steel, zero emission heavy
machinery

SUSTAINABLE FOOD PRODUCTION

Greenhouses, aquaculture, alternative
meat, sustainable packaging

WATER INNOVATION

Seawater desalination, brine
management, wastewater treatment,
system management devices

RENEWABLE ENERGY

Solar PV, green hydrogen, battery
storage, on-shore wind

TECHNOLOGY AND DIGITAL

Industrial, service and general-purpose
robots, communication infrastructure for
5G+, space systems, electronic components,
3D printing equipment

HEALTH AND WELLBEING

Pharma, biotech,
nutrition, medtech
