The Food, Supplies, Agricultural and Livestock industry sector is one of the most important Jordanian industrial sectors which has a multiplicity and diversity of products offered in local markets. Such products are permanently linked with the consumer's health and safety as food items constitute a major source for the energy, as well as the building up of the human body since they contain proteins, fats, sugars, starches in addition to vitamins and minerals. This sector has many advantages that are intertwined and interconnected with several other industrial sectors and that serve to form an associative kind of integration with other sectors. This sector is one of the most significant pillars of food security, as it works to increase the added value of the agricultural sector.
